sunbrella® umbrella fabric

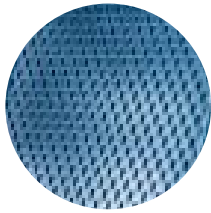

seat cushion fabric

polysite®

powdercoated metal

Pangard II® Polyester Powdercoat is a hard, yet flexible, finish that resists rusting, chipping, peeling and fading.

solid surface marneaux®

This 100% acrylic resin solid-surface material resists scratching, staining, chipping and cracking. Weather, harsh chemicals and UV rays have virtually no effect on the “through-body” color or structural integrity of the material. Optional colors are available at an additional charge.

polycarbonate

This high-performance plastic, which is extruded in sheets, is well known for its use in bulletproof auto and airplane windshields. Its advantages as an outdoor furniture material are its ability to achieve structural form with a very thin profile, impart translucent color and, by virtue of its extreme strength, resist damage by vandals, skateboards and snowplows. Polycarbonate meets the same BIFMA standards as perforated steel.

polyethylene

Rotationally-molded polyethylene is produced by tumbling polyethylene powder in a mold under heat. The material provides strong structure with integral color that stands up to heavy use and is easily cleaned. Aggregate colors are subject to an upcharge.

polysite®

Made of recycled 100% high-density polyethylene, polysite will not rot, splinter or crack and resists moisture, corrosive substances and insects.

sunbrella® umbrella fabric

Marine-grade fabric cover, 100% solution-dyed fiber treated for a high degree of fade-resistance; mildew proof; meets California Technical Bulletin #117 Section E (CS-191-53).

seat cushion fabric

Both Sunbrella® and Perennials furniture-grade fabrics offer mildew-proof, 100% solution-dyed fiber, highly resistant to UV damage and exceed industry standards for resistance to soil, mildew, tearing and abrasion.

All colors shown are approximate. Please call for samples. Colors subject to change without notice.
