The 35 family is growing with a new generation of high performance products that ramp up the energy and edge. Design partner frog built on the 35 family lineage and brought it fast forward with an LED path and streetlight, an illuminated bollard, and a lyrical bike rack that take this popular collection of integrated site elements to places it hasn’t been before.
These three core members of the 35 family share a strong work ethic and a gesture inspired by forms in nature. Pitch is a litter receptacle with flair. Sit is a four-legged bench with arms that open wide. Backless it can be used from either side; with back it provides a sofa-like sense of enclosure. Stay is a cantilever bench with a graceful supporting arc. Benches are cast aluminum with perforated steel seats.
Mingle is an open and inviting seating system that brings everybody to the table. Its distinctive asymmetric structure lends it an energetic air and makes access easy. The companion Shade umbrella has a graceful winged aluminum canopy that protects from the sun and imparts a sense of place. Positioned side-by-side, squared canopies create “waves.” Table mounted or stand alone.
This iconic chaise lounge epitomizes the easy disposition of the 35 family. Designed to bring a spirit of relaxation to outdoor public spaces, its sculptural form echoes the human body and supports the sitter in a posture that is reclined but not exposed. Made of rotational-molded polyethylene it is offered in a choice of colors, including new Landscape Forms bold orange.
Signal is an LED light with a focus on performance—in technology and design. The leaf-shaped cast aluminum luminaire holds multiple tri-pod arrays, each with its own lens for ease of replacement and repair. Form and details make a beautiful design statement while reducing weight and dissipating heat. Offered in pedestrian and streetscape versions, with single or dual luminaires.
The Loop bike rack is a simple, sweeping circle with a twist. Cyclists can loop and lock one bike or two around its shape-shifting cast aluminum ribbon frame. Functional and sculptural, it meets a growing need for secure bicycle docking in recreational spaces and "complete streets," carrying on the 3S Collection mission to support social activity in outdoor space.
guide

Guide is an illuminated bollard for pedestrian wayfinding, and one of three new additions to the 35 Collection of site elements created with design innovator frog. Its striking form consists of three cast aluminum panels of different heights surrounding a large optical element that houses LEDs arranged in vertical arrays. Light is emitted through the vertical slits between panels at 120° angles, illuminating the pathway area to the right and left of each bollard to create an overlapping pattern of light along the path. Unlit and removable versions are also available.
All cast aluminum and steel elements in the 35 Collection are finished with Landscape Forms proprietary Pangard® Powdercoat in colors from the company's Designer Palette.
